

Telstra Colocation

Stay connected while scaling your business, wherever you are.

Addressing interoperability and integration

The rise of the hybrid, multicloud model has a downside: there is greater management complexity across cloud borders, as well as challenges related to interoperability, security, cost and data integration. Addressing these interoperability and integration challenges is colocation's sweet spot. Colocation is firmly established as a central pillar of the hybrid IT mix and is also being chosen more often to support critical areas such as security, reliability, cost, and performance. With Colocation, businesses can improve connectivity and security at lower costs.

Why your business needs Colocation?

Colocation is an alternative to on-premises data centres where you can rent a physical space and colocate in a third-party data centre to store hardware and network connectivity. With Colocation, you can ensure the resiliency of your IT deployments while supporting your business for growth.

You can future-proof your deployments while innovating and driving business goals reliably with Telstra Colocation. Regardless of the size of your business, Telstra Colocation enables you to build the right kind of data centre for your business, whether you need single racks, whole cages or high-density server rooms.

Staying connected with Telstra Colocation

Telstra Colocation has secure and sustainable-focused data centres in more than 30 countries, supported by an expansive ecosystem of partners.

Includes partnered/
resell data centres with:

* Digital Realty data centres are enabled for specific regions, such as UK, USA, and Singapore, only, with additional countries possible through contract variations

Find out more about the data centres in each region on telstra.com/colocation

Features

Security

- Benefit from electronic security and round-the-clock global support, along with CCTV and on-site patrols for enhanced security.
- Keep business-critical processes running round the clock with multi-layer network, cooling, and power redundancy, including advanced UPS (uninterrupted power source) power protection.

High availability

- 24/7 on-site remote hands from professional certified experts ensure technical assistance should help be needed.
- Rapid 1-hour response time and services such as equipment resets, power cycling, and real-time indicator readings.

Customer service and managed services

- Comprehensive data centre migration services, amongst other Managed Services, to facilitate a smooth transition to our Colocation Services exchange.

Visibility around Service Level Agreements (SLAs)

- Access real-time rack statistics on power, temperature, and humidity via online portal.

Diverse geographic locations

- Choose from 360 managed or partnered data centres across 37 countries, including Asia Pacific, America, EMEA, and Australia, all offering low-latency core access for optimal performance.

Customisable infrastructure and connectivity

- Telstra offers flexible rack and power options along with power diversity for enhanced reliability.
- Enjoy seamless on-net access to all Telstra WAN services, diverse connection options, and carrier neutrality for ultimate network flexibility.

Sustainability initiatives

- 100% renewable energy use, efficiency improvements, and waste reduction initiatives.

Benefits

Global connectivity with eco-friendly footprint

- Access to state-of-the-art, sustainably operated data centres across countries, assuring you can tap into global markets while meeting environmental responsibilities.

Maximised potential and savings

- Exploit the full potential of cloud technologies, mitigating your concerns about future growth and technology shifts, while ensuring cost efficiency.

Innovate and drive business goals reliably

- Benefit from a robust infrastructure featuring fail-safes across generators and 24/7 global support, ensuring business continuity so you can concentrate on innovation rather than infrastructure-related worries.

Simplified finances

- Get a consolidated bill streamlining your expenses into a single, easy-to-manage invoice.

Why Telstra Colocation Services

Global reach

- Extensive business reach with presence in over 35 countries, including Pacific Islands
- Alliance ecosystem of the best technology leaders such as Cisco, Digital Realty, Equinix, Genesys, Microsoft and VMware

Recognised for excellence

- More than 22 industry awards from 2020 to date

Expertise

- Specialists certified on supported technologies, as well as other technologies, across multiple time zones within EMEA and Asia-Pacific
- Backed by compliance IT service management framework and ISO certifications

Maximise your cloud benefits and navigate the cloud with confidence with Telstra International.
